**Seventy Years of Farm Tractors 1930-2000** Brian Bell 2020-02-20 By the end of the

twentieth century there were some half-million tractors on British farms - more

machines than people to drive them. Brian Bell's encyclopaedic book traces the

evolution of the farm tractor from the days of starting handle and pan seat to

current 4-wheel drive machines with air-conditioned cabs and computer management

systems. He deals in particular with developments of the classic period from the

1950s to the 1990s. The book is arranged alphabetically by manufacturer from

Allis-Chalmers to Zetor, one hundred marques in total. These are all machines to

be found on British farms irrespective of their country of manufacture. Brian runs

concisely through the histories of the companies and their major models,

illustrated with a wealth of photographs and extracts from sales literature. He

adds some special features on items such as hydraulic systems and cold-starting

aids. He includes a glossary and full index. This book replaces the author's

earlier, successful, Fifty Years of Farm Tractors. Many of the photographs are new

and the text has been brought up to date to include developments of the early

twenty-first century.

**Safety is No Accident - From 'V' Bombers to Concorde** John R W Smith 2020-07-19

Flying, as everyone knows, is generally regarded as the safest means of

transportation. Yet for that to be the case an enormous amount of testing is

undertaken. Central to this, of course, are the test pilots, who fly the aircraft,

but it is the men behind the scenes who deal with the technical aspects of the

aircraft - the flight test observers and engineers. Numerous books have been

written by Test Pilots, but few, if any, from the perspective of an Aeronautical

Engineer working as Flight Test Observer/Engineer in partnership with the Test

Pilot. This book is an account of the author's flight-testing career, from the

1960s to early 1980s, at Avro and the Civil Aviation Authority (CAA). During the

author's time at Avro, he flew on the development and certification test flights

of the Avro 748, 748MF, Shackletons, Nimrod and Handley-Page Victor tanker. In the

CAA, his role turned to regulation, making flight test assessments of

manufacturer's prototypes and production aircraft, to check compliance with the

CAA's flight safety requirements. The scope ranged from single-engine light

aircraft to large civil transport aircraft. It involved frequent visits to foreign

manufacturers and also included his participation in the CAA's Concorde

certification flight test programme. Flight testing involves risk. Advancements in

the understanding of aerodynamics and an increasingly professional approach to

risk management improved safety, but it would never be risk-free. Several of the

author's close friends and colleagues died in flight test accidents during this

period of rapid aeronautical development; all on civil aircraft types. It is

because of such people that the millions of flights undertaken each year are

trouble-free.
