**Institutions Taking Root** Naazneen H. Barma 2014-09-09 Building and operating successful public

institutions is a perennial and long-term challenge for governments, which is compounded by the volatile conditions found in fragile settings. Yet some government agencies do manage to take root and achieve success in delivering results earning legitimacy and forging resilience in otherwise challenging contexts. Drawing on mixed-method empirical research carried out on nine public agencies in Lao PDR, Sierra Leone, The Gambia, and Timor Leste, this volume identifies the shared causal mechanisms underpinning institutional success in fragile states by examining the inner workings of these institutions, along with the external operational environment and sociopolitical context in which they exist. Successful institutions share and deploy a common repertoire of internal and external operational strategies. In addition they connect this micro-institutional repertoire to the macro-sociopolitical context

**Belief Functions in Business**

**Decisions** Rajendra P. Srivastava  
2013-11-11 The book focuses on applications of belief functions to business decisions. Section I introduces the intuitive, conceptual and historical development of belief functions. Three different interpretations (the marginally correct approximation, the qualitative model, and the quantitative model) of belief functions are investigated, and rough set theory and structured query language (SQL) are used to express belief function semantics. Section II presents applications of belief functions in information systems and auditing. Included are discussions on how a belief-function framework provides a more efficient and effective audit methodology and also the appropriateness of belief functions to represent uncertainties in audit evidence. The third section

deals with applications of belief functions to mergers and acquisitions; financial analysis of engineering enterprises; forecast demand for mobile satellite services; modeling financial portfolios; and economics.

Communicating in Business and Technology J. M. Ulijn 1995

Communication is an important aspect of the behavior of the business manager and engineer whose success depends on effective communication skills, the more so as the international world of business and technology becomes increasingly complicated and as economic, technical, and cultural interests become more interwoven. In its exploration of language needs and applications in international business and technology, this book attempts to bridge the gap between the purely theoretical and the strictly applied. Thus, it presents useful psycholinguistic research,

linguistic descriptions, and discourse analysis as they are applied to current international business and technical communication. Translation, as well as other cross-linguistic and cross-cultural issues are discussed. The skills of listening and speaking are discussed within the context of negotiation, and reading and writing are integrated within the context of effective technical documentation. Finally, some style sheets and practical guidelines for such crucial documents as proposals and executive summaries are given.

The Satellite Communication Applications Handbook, Second Edition

Bruce R. Elbert 2004 Since the publication of the best-selling first edition of the Satellite Communication Applications Handbook, the satellite industry has experienced explosive growth thanks to a flood of innovations in consumer

electronics, broadcasting, the Internet, transportation, and broadband telecommunications. This second edition covers all the latest advances in satellite technology and applications and features new chapters on mobile digital audio radio and VSAT networks. It updates and expands upon the engineering and management topics that made the first edition a must-have for every satellite communications professional as well as network architects. Engineers get the latest technical details into operations, architectures, and systems components. Managers are brought up to date with the latest business applications as well as regulatory and legal decisions affecting domestic and international markets. the treatment is also of value to marketing, legal, regulatory, and financial and operations professionals who must gain a clear understanding of the capabilities and

**Global Mobile Satellite Systems** Peter

A. Swan 2012-12-06 Global Mobile

Satellite Systems - A Systems

Overview makes mobile satellite communications understandable for communication engineers, candidates for an engineering degree,

technicians, managers, and other decision makers such as financiers and regulators. It provides a systems oriented top-level view of mobile

satellite communications. In

particular, it focuses on Global

Mobile Satellite Systems (GMSS)

including active programs such as Globalstar, IRIDIUM, ORBCOMM, ACeS, and Thuraya, or so-called the second generation mobile satellite systems class. The authors start with a brief

description of three generations of satellite systems in use or planned in the telecommunications industry. Selected systems architectural trades are identified and explained to illustrate how various GMSS systems are formulated, developed and evaluated. It includes an examination of market demand trends, business trades, regulatory issues as well as technical considerations. Major issues are examined in trade study style to provide easy access to key information. Key systems drivers such as orbit trades between LEO's, MEO's, and GEO's, frequency, protocols, customer bases, and regulatory and engineering issues are included. This book should appeal to individuals interested in the basic elements of Global Mobile Satellite Systems.

**Capitalist Nigger** Chika Onyeani

2012-03-27 Capitalist Nigger is an explosive and jarring indictment of the black race. The book asserts that

the Negroid race, as naturally endowed as any other, is culpably a non-productive race, a consumer race that depends on other communities for its culture, its language, its feeding and its clothing. Despite enormous natural resources, blacks are economic slaves because they lack the 'devil-may-care' attitude and the 'killer instinct' of the Caucasian, as well as the spider web mentality of the Asian. A Capitalist Nigger must embody ruthlessness in pursuit of excellence in his drive towards achieving the goal of becoming an economic warrior. In putting forward the idea of the Capitalist Nigger, Chika Onyeani charts a road to success whereby black economic warriors employ the 'Spider Web Doctrine' - discipline, self-reliance, ruthlessness - to escape from their victim mentality. Born in Nigeria, Chika Onyeani is a journalist, editor and former diplomat.

*Ten Strategies of a World-Class Cybersecurity Operations Center*  
Carson Zimmerman 2014-07-01  
Ten Strategies of a World-Class Cyber Security Operations Center conveys MITRE's accumulated expertise on enterprise-grade computer network defense. It covers ten key qualities of leading Cyber Security Operations Centers (CSOCs), ranging from their structure and organization, to processes that best enable smooth operations, to approaches that extract maximum value from key CSOC technology investments. This book offers perspective and context for key decision points in structuring a CSOC, such as what capabilities to offer, how to architect large-scale data collection and analysis, and how to prepare the CSOC team for agile, threat-based response. If you manage, work in, or are standing up a CSOC, this book is for you. It is also available on MITRE's website, [www.mitre.org](http://www.mitre.org).

*Satellite Systems for Personal Applications* Madhavendra Richharia  
2011-07-05 Presents the concepts, technology, and role of satellite systems in support of personal applications, such as mobile and broadband communications, navigation, television, radio and multimedia broadcasting, safety of life services, etc. This book presents a novel perspective on satellite systems, reflecting the modern personal technology context, and hence a focus on the individual as end-user. The book begins by outlining key generic concepts before discussing techniques adopted in particular application areas; next, it exemplifies these techniques through discussion of state-of-art current and emerging satellite systems. The book concludes by contemplating the likely evolution of these systems, taking into consideration influences and trends in technology, in conjunction with

growing user expectations. In addition to addressing satellite systems that directly interact with personal devices, the book additionally considers those indirect applications where there is an increasing interest by individuals - notably, in remote sensing. As such, the book uniquely encompasses the entire gamut of satellite-enabled personal / end-user applications. Key Features: Broad scope - views satellite systems generically with regards to their applicability across a wide range of personal application areas Strong foundation in underlying concepts State-of-the-art system examples Review of trends in relevant areas of satellite technology Revision questions at the end of each chapter The book is suited to individuals, engineers, scientists, service providers, system operators, application developers and managers interested or involved in the use of satellite technology for personal

applications. It should also hold interest for use in research institutes interested in promoting inter-disciplinary cross-fertilization of ideas, as well as by financiers, policy makers, and strategists interested in gaining a better understanding of this technology.

Discrete Choice Methods with Simulation Kenneth Train 2009-07-06

This book describes the new generation of discrete choice methods, focusing on the many advances that are made possible by simulation. Researchers use these statistical methods to examine the choices that consumers, households, firms, and other agents make. Each of the major models is covered: logit, generalized extreme value, or GEV (including nested and cross-nested logits), probit, and mixed logit, plus a variety of specifications that build on these basics. Simulation-assisted estimation procedures are investigated and compared, including maximum simulated likelihood, method of simulated moments, and method of simulated scores. Procedures for drawing from densities are described, including variance reduction techniques such as antithetics and Halton draws. Recent advances in Bayesian procedures are explored, including the use of the Metropolis-Hastings algorithm and its variant

Gibbs sampling. The second edition adds chapters on endogeneity and expectation-maximization (EM) algorithms. No other book incorporates all these fields, which have arisen in the past 25 years. The procedures are applicable in many fields, including energy, transportation, environmental studies, health, labor, and marketing.
