Specialised Dictionaries for Learners Pedro A. Fuertes-Olivera 2010-03-26 The need for constructing a lexicographical theory with a particular focus on specialised dictionaries for learners is well documented in recent publications. This will imply paying attention to, at least, four basic lexicographic categories: learners; the learner's situation; the learner's needs; dictionary assistance. In one or other way, these categories are analysed in this book, whose eleven chapters are grouped into three parts. Part 1 reflects on some of the main ideas defended by the function theory of lexicography, perhaps the theoretical framework that has paid more attention to specialised lexicography. Part 2 presents some proposals that have already been explored in the field of general learner's dictionary and must be incorporated into specialised metalexicography: cultural aspects; figurative meaning; the inclusion of grammatical information; the use of corpora. Part 3 introduces the state of play regarding specialised dictionaries in China and offers some ideas for coping with the proliferation of terminological glossaries in

Internet. The book also describes Enrique Alcaraz's academic achievements, together with some personal anecdotes, and a personal short tribute to his memory.

Intentional Perspectives on Information Systems Engineering Selmin Nurcan 2010-06-17

Requirements engineering has since long acknowledged the importance of the notion that system requirements are stakeholder goals—rather than system functions—and ought to be elicited, modeled and analyzed accordingly. In this book, Nurcan and her co-editors collected twenty contributions from leading researchers in requirements engineering with the intention to comprehensively present an overview of the different perspectives that exist today, in 2010, on the concept of intention in the information systems community. These original papers honor Colette Rolland for her contributions to this field, as she was probably the first to emphasize that ‘intention’ has to be considered as a first-class concept in information systems engineering. Written by long-term collaborators (and most often friends) of Colette Rolland, this volume covers topics like goal-oriented requirements engineering, model-driven development, method engineering, and enterprise modeling. As such, it is a tour d’horizon of Colette Rolland’s lifework, and is presented to her on the occasion of her retirement at CalSE 2010 in Hammamet, the conference she once cofounded and which she

helped to grow and prosper for more than 20 years.

Viral Spiral David Bollier 2008 A narrative history of the emergence of electronic "free culture" explains how strict intellectual property rights, hierarchies of credentialed experts, and other forms of centralized control are being challenged and reshaped by the world of digital media, in an account that includes coverage of such figures as hacker Richard Stallman and copyright scholar Lawrence Lessig. 20,000 first printing.

Modern Marine Internal Combustion Engines

levgen Bilousov 2020-06-30 This book offers a comprehensive and timely overview of internal combustion engines for use in marine environments. It reviews the development of modern four-stroke marine engines, gas and gas–diesel engines and low-speed two-stroke

crosshead engines, describing their application areas and providing readers with a useful snapshot of their technical features, e.g. their dimensions, weights, cylinder arrangements, cylinder capabilities, rotation speeds, and exhaust gas temperatures. For each marine engine, information is provided on the manufacturer, historical background, development and technical characteristics of the manufacturer's most popular models, and detailed drawings of the engine, depicting its main design features. This book offers a unique, self-contained reference guide for engineers and professionals involved in shipbuilding. At the same time, it is intended to support students at maritime academies and university students in naval architecture/marine engineering with their design projects at both master and graduate levels, thus filling an important gap in the literature.

Advanced Information Systems Engineering Anne Persson 2004-08-18 th CAiSE 2004 was the 16 in the series of International Conferences on Advanced Information Systems Engineering. In the year 2004 the conference was hosted by the Faculty of Computer Science and Information Technology, Riga Technical University, Latvia. Since the late 1980s, the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering. The conference theme of CAiSE 2004 was Knowledge and Model Driven Information Systems Engineering for Networked

Organizations. Modern businesses and IT systems are facing an ever more complex environment characterized by openness, variety, and change. Organizations are becoming less self-sufficient and increasingly dependent on business partners and other actors. These trends call for openness of business as well as IT systems, i.e. the ability to connect and interoperate with other systems. Furthermore, organizations are experiencing ever more variety in their business, in all conceivable dimensions. The different competencies required by the workforce are multiplying. In the same way, the variety in technology is overwhelming with a multitude of languages, platforms, devices, standards, and products. Moreover, organizations need to manage an environment that is constantly changing and where lead times, product life cycles, and partner relationships are shortening. The demand of having to constantly adapt IT to changing technologies and business practices has resulted in the birth of new ideas which may have a profound impact on the information systems engineering practices in future years, such as autonomic computing, component and services marketplaces and dynamically generated software.
